

I am working on deciding on which home alarm system to bring down and a question came up about what the SMS Gateway for Digicell in Belize is. This is the path for an email to be sent to someone as a text message on a phone. Do you know the answer?

They block it. I assume you have a system that sends email when events are triggered and you want the email to go out to a Belize number like 6101212@digicell.bz which would show up as text.

They block the ability of people to receive SMS by email in Belize. A hack could be worked out if the person has a droid phone.
